Hunter Creates New "Gulf" Sales Division

Joe Fuller, Gulf States Division Manager

Chris Tullus, Los Angeles Regional Manager

Beau Brauer, New York Regional Manager

Frank Ponte, Boston Regional Manager

Davis Shular, Cincinnati Regional Manager

John Murray, Cleveland Regional Manager

Hunter Vice President of Sales and Marketing Dave Smith has announced the creation of the company's Gulf States Division and named Joe Fuller to lead it. The new division is now one of five that oversee 23 Hunter field organization regions covering the United States. Headquartered in Dallas, the Gulf States Division oversees Hunter's Dallas, Houston, Denver and New Orleans sales and service regions.

Fuller is a 22-year Hunter veteran. He joined the company as a sales representative and has served Hunter as a regional manager and as the Director of International. In addition to his new responsibilities, he will also manage Hunter's Dallas Region.

Smith also announced new company-wide regional manager appointments. Chris Tullus now heads the Los Angeles Region, Beau Brauer the New York Region, Frank Ponte the Boston Region, Davis Shular the Cincinnati Region and John Murray the Cleveland Region. Brauer, Ponte and Murray now report directly to Hunter North East Division Manager Doug Woolverton, Shular to North Central Division Manager Greg Dunkin and Tullus to Western Division Manager Bill Markey.

Hunter Regional Managers are directly responsible for all of the company's field organization activities in their respective regions. This includes overseeing collectively more than 600 sales and service representatives, the largest dedicated undercar sales and service force in the industry, and Hunter's network of regional training centers that teach more than 10,000 students annually.

Hunter Alignment Lifts Provide the Weight and Length Capacity to Service New Toyota Tundra CrewMax

Hunter is offering Toyota dealers solutions for upgrading their alignment bays to meet the service requirements for the Tundra CrewMax 4-door pickup. Hunter produces a range of alignment lift rack models and configurations that meet the 165-inch length and 12,000-lb. weight capacity for servicing the new extended wheelbase Tundra models, the largest pickup in Toyota's U.S. fleet. Matching Hunter's versatile camera-based wheel alignment technology with the longer and heavier, Toyota-approved Hunter lifts offers the capability, capacity and time-saving features to handle everything from the smallest Toyota compact to the largest edition Tundra with maximum speed and efficiency.

This RX12XL Scissor Lift is one of several Hunter alignment lift racks that meet Toyota requirements for Tundra service. The exclusive Hunter PowerSlide™ feature, AlignLights rack lighting system, Swing Air Jacks and other options save technicians time and effort when performing alignment procedures.

Industry Week, Las Vegas – October 31 to Nov

Crowd stopper was one accurate description of the Hunter exhibits overheard at the 2006 Industry Week events in Las Vegas. Informative product demonstrations were an important part of Hunter's strategy for the automotive aftermarket industry's flagship gathering. The result was exhibits that not only attracted large crowds, but also quickly and concisely delivered useful information to time-stressed show attendees.

The perimeter of Hunter's AAPEX booth was circled with equipment demonstration and information towers. At the base of each tower was an equipment unit with audio and video links to a flat screen monitor topping each tower. Attendees could see and hear the demonstrations while following the accompanying video displays. Following the demonstration, the attendees could simply step inside the exhibit and discuss their equipment needs and business goals in a one-on-one setting with Hunter staff.

Hunter's trade show exhibits are custom designed in-house for each event and reflect the wide range of new products and features that the company typically introduces each year.

Inside the exhibit, Hunter staff were ready to answer questions and discuss equipment needs.

Some of the more than 30 sales, service and engineering professionals who staffed the company's four major Industry Week exhibits in Las Vegas are shown at the AAPEX exhibit. Hunter also had booths at the SEMA, NACE and CARS shows.

September 3, 2006

Hunter was invited by GM to provide equipment for the automaker's regional dealer meeting that coincided with the Industry Week events. These GM-approved equipment designs feature paint schemes and accessories that meet GM dealer service requirements.

Hunter technology of particular interest to SEMA show attendees included the specialized vibration management capabilities of the GSP9700 Road Force Measurement® System, tire changers designed to handle the most difficult low-profile tires and custom rims, and WinAlign Tuner™ alignment software for modified vehicles.

Hunter staff demonstrate the productivity and profitability features of the TC3500 tire changer. Some of the most popular new equipment and features on display included Hunter's newest version of WinAlign® alignment software, WinAlign Tuner for modified vehicles, SmartWeight™ balancing technology, and the OCL430MD on-vehicle brake lathe for up to medium-duty truck service and new rack designs including the PowerSlide™ system.

Original Durant Production Team Members Honored

A special group of Hunter team members gathered at the company's Durant Mississippi production facility recently to celebrate an exceptional anniversary. Each of the nine employees began their Hunter careers at the Durant plant during its first year of operation 30 years ago. The facility opened its doors in 1976 to produce Hunter alignment racks and jacks and remains the company's sole rack and jack production facility. Recognizing their loyal service, Hunter President Stephen Brauer presented each with a gold company ring.
